

Finish 2020 Strong with

NCCM[®] N2

Value-Add Nonwoven Rolls

The universal option—2 fulfill high-performance friction, and fluid control demands

No doubt, 2020 has been an extraordinarily challenging year for all of us, but we believe our NCCM[®] N2 nonwoven roll can help finish off the year strong!

NCCM has used this time to focus internally on *Product Development and Improvements*. Our primary focus has been to reinforce the quality and performance of N2. We continue to follow our core values of quality, service, commitment, and technology development by examining and perfecting our manufacturing process, product appearance, roll performance, and final product quality.

The result is the next generation of

NCCM[®] N2.

N2 is designed to be a value add and complement our NCCM[®] Premier Yellow as a multi-purpose roll to improve product and process qualities in multiple positions. Every single sleeve or roll we build is custom engineered to outperform our competitors' rolls, specifically in service life. NCCM[®] N2 rolls are made with the same technology and high-quality nonwoven materials and boast the same key performance features you have come to know and expect from your NCCM products:

Repairability | High Coefficient of Friction | Precision Fluid Control | Long Life
